

Slingshot II Shoulder Brace

Visit our website at:

<http://www.alliedboneandjoint.com/patient-information/>

You are receiving the Slingshot II shoulder brace because you are having one of the following procedures:

- Total Shoulder
- Reverse Total Shoulder
- Shoulder Arthroscopy

Shoulder braces are designed to support and stabilize, or immobilize the shoulder either post-surgery or post-trauma. This shoulder brace includes the use of abduction pillows to hold the arm in the correct position as the arm heals. The exercise ball is used to stimulate circulation and a thumb rest to minimize migration. The type of brace and the position of the arm are dependent upon physician protocols and indications.

This brace will be placed on you post-surgery and should be worn until your first post-operative appointment. You may remove the sling to shower.

To find out more about shoulder brace, proper positioning and care, go to www.Breg.com - Shoulder Braces or visit our website at www.alliedboneandjoint.com/patientinformation.
